

2021 Outlook: Indian Equities

India, like many markets in the pandemic, experienced a difficult 2020, with its economy contracting the most since 1952¹. However, recent data points to the conclusion that the worst may be over as new COVID-19 cases decline and economic activity accelerates. In this 2021 Outlook, Rana Gupta (Senior Portfolio Manager and Indian Equities Specialist) and Koushik Pal (Senior Analyst), present their views on how a sharp growth comeback is likely this year given favourable structural government policies and cyclical tailwinds that support two transformative medium-term trends: formalisation through a digital economy and reinvestment in manufacturing.

2021 Outlook: India's growth comeback

Despite the economic and societal challenges of the COVID-19 pandemic, we believe that the worst is likely behind us and the stage is set for growth in India to make a strong comeback in 2021². This will be driven by the government's long-term policy framework and the Reserve Bank of India's (RBI) supportive monetary policies. The growth outlook is further underpinned by benign monetary conditions and low real rates resulting from substantial inward capital flows seeking to participate in India's long-term growth story. An end to the economic disruptions caused by the COVID-19 pandemic in India is now clearly visible: active cases have consistently declined over the past three months, and a large-scale vaccination programme commenced in January 2021.

Indeed, the focus should now turn to medium and long-term growth themes that are receiving further impetus through government policy action during the pandemic and the recently released 2021 Union Budget.

Two powerful themes have emerged from the focused policy agenda of the past six years (see Chart 1). We believe these will drive India's medium-term growth potential:

- 1) Formalisation through a digital economy;
- 2) Reinvestment in manufacturing.

Chart 1: Virtuous cycle of two transformative medium-term themes³

These two themes should serve as primary tailwinds for the country's growth potential over the medium term. Both can also feed off each other to create a virtuous cycle that should generate more jobs, improve domestic savings, and enable reinvestment in better infrastructure. On the one hand, formalisation is driving the growth of a massive digital economy; at the same time, the digital economy is itself driving the formalisation process by boosting productivity.

We also believe that manufacturing growth is at an inflexion point. India should continue to benefit from

³ Source: Manulife Investment Management.

global capital inflows, as trade tensions and the diversification of supply chains outside of China are trends that are likely to persist in the medium term. International firms have already committed large investments in areas like electronics manufacturing, and the Indian government has turned its policy agenda firmly toward incentivising the localisation of manufacturing. As manufacturing grows, more formal jobs will be created, which we believe will drive income growth and consumption, thereby unleashing another virtuous cycle of growth.

Previous structural reforms serve as foundation for growth

In our past investment notes, we have consistently highlighted that despite the challenges of the COVID-19 pandemic in 2020 and the cyclical slowdown that preceded it, India remains a local, bottom-up story that is supported by a host of structural reforms already in place to promote formalisation: the JAM⁴ trinity, lower corporate taxes, indirect tax reform (GST), real estate regulations (the RERA Act), and the Bankruptcy Act.

We had also argued that with the fundamental building block of formalisation in place, the Indian government has a unique opportunity to revitalise economic growth through a policy framework we called the “3 Rs”:

- 1) **Recycle:** Funding government spending needs through the privatisation of state-owned enterprise (SOE) assets.
- 2) **Rebuild:** Aggregating savings by providing tax cuts to the private sector and households. Further augmenting savings by opening various sectors to FDI.
- 3) **Reinvest:** Providing incentives for manufacturing firms and global capital to reinvest such savings to substitute imports and increase the country's global market share of exports.

While the *Recycle* initiatives briefly took a backseat in 2020 amid the disruption posed by the pandemic,

the government has consistently moved ahead on Rebuild and Reinvest policy agenda over the past 18 months, focusing on long-term policies during the pandemic to reduce the corporate tax rate, simplify labour laws, and incentivise localisation of manufacturing, rather than just concentrating on fiscal stimulus⁵.

Union Budget supports and amplifies growth agenda

The latest Union Budget presented on 1 February 2021 privileged growth over near-term fiscal discipline. It also avoided any sudden tax increases that could have affected investor sentiment. We believe this is the right policy agenda, as the fledgling economic recovery needs spending and policy support. Benign global monetary conditions and bottom-up factors favour India, meaning that markets can support more near-term borrowing from the government.

While some near-term fiscal relaxation has been taken, the medium-term fiscal consolidation path remains intact and consistent. Despite being higher than previous targets, the fiscal deficit is still projected to fall to 6.8% in FY2021-2022 from 9.5% in FY2020-2021⁶. The medium-term fiscal consolidation path has also been defined with a targeted deficit of less than 4.5% over the next five years⁷.

We believe next year's targets are conservative. The actuals are likely to surprise positively, as we find both the nominal GDP growth estimates and tax growth targets conservative given the tailwind to tax collection and high-frequency indicators that we have seen over the past few months.

More importantly, we see that government spending and policy aims should have a better multiplier effect rather than just providing short-term stimulus; and multiple policy announcements in our 3R framework should strengthen medium-term growth potential and attract foreign capital:

⁴ JAM stands for “Jan Dhan Yojana, Aadhaar and Mobile”, which is a government initiative to link Jan Dhan accounts, mobile numbers and Aadhar cards.

⁵ The government reduced the corporate tax rate to 22%, consolidated 44 different labour laws into four labour codes, and introduced

production-linked incentive schemes in key electronic and pharmaceutical manufacturing segments.

⁷ India Ministry of Finance: <https://www.indiabudget.gov.in/>.

Recycle: The budget has gone big in this category with an ambitious asset-monetisation programme:

- Privatisation of two SOE banks and insurance companies
- Creation of more REIT-like structures to monetise road highways, power distribution, and rail assets (dedicated freight corridors).
- Monetisation of other core infrastructure assets such as airports, oil & gas pipelines, railway infrastructure, sports stadiums, toll roads, and warehousing.

Rebuild:

- Extension of special tax benefits for affordable housing to support real-estate recovery.
- Provision of approximately US \$2.7 billion to recapitalise the SOE banks⁸.
- Plans to create an asset reconstruction company (ARC) to take over stressed banking sector may help accelerate an NPA resolution.
- Raising the FDI limit for insurance companies from 49% to 74% is likely to introduce more capital to India's attractive insurance sector

Reinvest:

- Capex allocation has seen a healthy growth of 26% in the current year, focusing on areas like road, rail, defence, and urban housing. There is an additional allocation for the social-policy agenda, such as education, healthcare, and public transport networks. At the same time, there is a reduction in subsidies to fund long-term spending.
- Plans to establish a development finance institution (DFI) that will provide infrastructure financing with a targeted lending portfolio of around US \$68 billion in three years⁹.
- To further incentivise localisation, customs duties on specific auto components, mobile parts, and electrical components have been raised.

Successful 3R policies should drive higher savings and lower deficits

A growth agenda driven by successful 3R policies (formalisation, digitisation, and manufacturing) should increase domestic savings. As formal employment and capital formation improve, so should tax collection and capital inflows, giving the government more room spend, but without the cost of higher deficits. Indeed, these factors should potentially help reduce the estimated fiscal deficit quicker after reaching its peak of 9.5% of GDP in FY 2021 towards the medium-term goal of 4.5% (see Chart 2).

⁹ Source: India Ministry of Finance: <https://www.indiabudget.gov.in/>.

¹⁰ Fiscal Deficit- Source: RBI, MoF, Kotak Economics Research estimates, as of 2 February 2021.

As a result of successful 3R policies, we have already seen a rise in India's share of net exports in areas such as electronics and chemicals. India has also garnered a higher regional share of FDI and FPI flows over the past 12 months¹¹. This has augmented domestic savings, pushed the current account to surplus, and propelled forex reserves to an all-time high¹². As growth improves in 2021, we expect the current account surplus to moderate due to higher consumer demand. However, we believe that the structural trend of a higher share of foreign flows to India will continue, and this should keep external account balances manageable, despite higher growth.

Cyclical tailwinds should drive growth prospects

Given the favourable structural backdrop, we also see three key cyclical factors turning positive, which augurs well for a V-shaped growth recovery in growth in FY 2021-2022, with real GDP growth projected to reach double digits.

1. Monetary conditions remain benign

Real rates have come down due to higher foreign flows (capital account), supportive central-bank policies, and gains in the share of net exports (current account) that are augmenting domestic savings and liquidity. The RBI has supported the recovery with various policy tools, including market interventions, to ensure that both the pricing and credit availability are adequate for growth to recover. This has pushed real rates into negative territory and consumer lending rates to decade-low levels (see Chart 3).

We expect low real rates to be a strong catalyst for capex. We have already seen this in household capex where low rates and targeted incentives have catalysed a nascent recovery in the real-estate market across major cities. The volume of property sales has crossed pre-COVID levels, and listed developers are posting strong year-on-year growth.

Chart 3: Negative real rates and low home lending rates propel investment¹³

2. The COVID-19 pandemic situation has improved quite sharply

Since peaking in mid-September 2020, active COVID-19 cases have continued their sustained downward trajectory (as of the end of January 2021- see Chart 4). India has already started a mega vaccination programme that targets a goal of 300 million people by the end of July – this includes 30 million healthcare and other frontline workers, and those aged over 50 or with pre-existing medical conditions¹⁴. As of 30 January 2021, 3.74 million people had been vaccinated¹⁵. In our view, India has enough domestic capacity to produce COVID-19 vaccines. As the vaccination drive picks up pace, we anticipate improvements in more sectors, especially on the services side, which should further boost the recovery.

¹⁴ Reuters, 15 January 2021.

¹⁵ Our World in Data, as of 31 January 2021.

Chart 4: COVID-19 cases have likely peaked¹⁶

3. Economic conditions have likely bottomed

We have seen both a pickup in high-frequency indicators and an upgrade of GDP estimates for FY2021-2022 at the RBI's recent monetary policy meeting. As the pandemic situation sharply improves, economic activity has normalised faster than expected: over the past few months, high-frequency indicators have surprised positively (see Chart 5). We expect this trend to continue, as economic activity completely normalises over the next few quarters.

Chart 5: Economic growth has likely bottomed¹⁷

Cyclical upturn supporting medium-term themes drives sectoral outlook

Given our view that India should experience a sharp growth recovery in 2021 based on cyclical tailwinds supporting the two medium-term growth drivers, we have a positive outlook for the following sectors:

- **Financials**

Financials should benefit from both a cyclical upturn, such as a growth revival in vehicle sales and housing, as well as longer-term structural trends including higher spending through the formal channels like digital (e.g., credit cards) and an increasing savings pool in the country. We expect banking-asset quality to remain under control, as large private banks have raised capital to strengthen their balance sheets, pandemic-related stress has been lower than expected, and the RBI has actively intervened in the market to prevent systemic issues.

- **Materials and Industrials**

In our view, these sectors directly benefit from economic recovery, increased government spending on infrastructure, and an upturn in real estate through cement, building materials, and commercial vehicles.

- **Consumer Discretionary**

As economic growth rebounds, this sector should continue to do well with higher sales of discretionary items like consumer durables, electronics, and automobiles.

- **Structural themes**

We remain constructive on macro themes, like import substitution plays, that benefit from the government's supportive domestic manufacturing (EMS companies, auto ancillaries) policies, and a production diversification away from China due to the trade war (speciality chemicals). These companies are present across both the consumer discretionary and materials sectors.

¹⁶ www.covid19india.org, as of 2 February 2021.

¹⁷ CSO, Kotak Institutional Equities estimate, January 2021.

We hold a more cautious view on:

- **Consumer staples**

Valuations have rerated ahead of growth expectations, as they were seen to benefit from the lockdown. We see better opportunities in more cyclical sectors like consumer discretionary and financials.

- **Energy**

Most companies in this sector have weak ESG characteristics and uncertain growth outlooks.

2021 outlook looks compelling

To conclude, we believe that the worst is behind us and the stage has been set for a strong comeback in 2021 as cyclical challenges are behind us and the recovery will be two pronged, i.e. **formalisation** will continue to boost the digital economy and **reinvest policies** which should lead to a revival in manufacturing. Given favourable structural government policies and cyclical tailwinds that support the two transformative medium-term trends, we believe the medium to long-term investment outlook for Indian equities remain compelling.

Disclaimers

A widespread health crisis such as a global pandemic could cause substantial market volatility, exchange trading suspensions and closures, and affect portfolio performance. For example, the novel coronavirus disease (COVID-19) has resulted in significant disruptions to global business activity. The impact of a health crisis and other epidemics and pandemics that may arise in the future could affect the global economy in ways that cannot necessarily be foreseen at the present time. A health crisis may exacerbate other pre-existing political, social and economic risks. Any such impact could adversely affect the portfolio's performance, resulting in losses to your investment

Investing involves risks, including the potential loss of principal. Financial markets are volatile and can fluctuate significantly in response to company, industry, political, regulatory, market, or economic developments. These risks are magnified for investments made in emerging markets. Currency risk is the risk that fluctuations in exchange rates may adversely affect the value of a portfolio's investments.
